

How to put graphics from web sites onto overlays

You can create overlays that let students go directly to web sites. If you want to put graphics from web sites onto your overlay you must save these on your hard drive as .bmp files.

To add a picture from a website:

1. Go to the website;
2. **Click** on the picture with the **right mouse button**;
3. Click **Save Picture As...** and type in a file name.

4. Make sure you know which folder the picture is saved in!

5. Make sure **Save as type** is set to **Bitmap**.

6. Click **Save**

7. Now you can choose the picture when you are using Concept Plus Editor to [make your overlay](#).
