

# Quick Start Guide to Concept Plus

---

Concept Plus is the software that lets you create and use Concept Keyboard overlays with any Windows application e.g. Writing with Symbols 2000, Word. It comes in 2 parts; Concept Plus Driver for using and Concept Plus Editor for creating overlays.

## To use an overlay

1. It is best to plug your Concept Keyboard into the computer before you switch the computer on. Don't plug your Concept Keyboard into the computer when the Concept Plus Driver program is running.
2. Switch on your computer.
3.  Double click on the Concept Plus Driver icon or choose it from the **Programs** list.
4. A Concept Plus Driver icon will appear at the bottom of the screen. Concept Plus Driver will always load the last overlay you used.
5. Run the program you want to use the overlay with, e.g. WWS2000.
6. Press the Concept Keyboard to write.
7. When you have finished use the Concept Plus Driver **menu** to **exit**.

## To choose a different overlay

1. Click on the Concept Plus Driver icon at the bottom of the screen. 
2. Click on the **File** menu and select **Open**.
3. Choose your overlay from the list and click on **Open**.

## If it doesn't work...

1. Check **both** ends of the lead to make sure it isn't loose.
2. Check that Concept Plus Driver (not Concept Plus Editor) is running and that an overlay has been chosen. Click on the Concept Plus Driver icon at the bottom of the screen to see which overlay has been chosen.
3. Click the Concept Plus Driver Keyboard menu, click Choose Board and check that it is set for the correct COM port. You can always try them all to see which one works! Also check that the Device Used is set to Concept Keyboard 256 if you have a standard Concept Keyboard.
4. Try attaching another Concept Keyboard if you have one. If it works then you have a faulty board. If it doesn't then the Concept Plus Driver software may be corrupt. You can phone us on 01707 266714 for technical support.
